

Types of Computer System

Wyatt's Farm Shop is a local garden centre, owned and managed by Peter Wyatt. The owner has decided that the business would benefit from increased investment in a new computer system. Unfortunately, his understanding of computer systems is limited and he requires your expertise and advice on the systems which might benefit the garden centre most of all. He has compiled a list of different types of system:

- Desktop
- Server
- Smartphone
- Tablet
- Embedded Systems
- Mainframe
- Quantum

Mr Wyatt would like you to **explain each type of system in simple terms**. It would be helpful if you could **explain how each system might be utilised by the garden centre**. An awareness of the **benefits and limitations of each type of system** would also be useful.

Select an appropriate medium to communicate this information back to Mr Wyatt.
